metal homeostasis factor.
metal homeostasis factor.
Saccharomyces cerevisiae (baker's yeast)
Saccharomyces cerevisiae
Bukaryota; Fungi; Ascomycota; Saccharomyceties;
Saccharomycetales; Saccharomycetaceae; Saccharomyces.

1 (bases I to 2961)
1 inin, 5.4. and Culotta, V.C.
The ATXI gene of Saccharomyces cerevisiae encodes a small metal homeostasis factor that protects cells against reactive oxygen
                                                                                                                                                                                                                                                                                                                                                                                                          .83 AspileMetAlaGlnIleSerIleThrAsnGlyAspLysGluValGluAspTyrGluLys

title notine nature (URL, http://www.sanger.ac.uk/Projects/S_pombe/)
Protein coding regions (CDS) have been predicted with the help of computer analysis using the Genefinder program in PomBase (an ACEDB database) with additional predictions for the branch-acceptor sites supplied by the program spisplied. CAUTION: It is possible that for number of introns/exons or we may not have chosen the correct splice donor/acceptor sites.

CDS are numbered using the following system eg SPACSHI0.01c. SP (S. pombe). A (drivnosome 1), c5HIO (cosmid name), .01 (first CDS), c (complementary strand).

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

IMPORTANT: This sequence MAY NOT be the entire insert of the sequence close is given for each CDS.

IMPORTANT: This sequence MAY NOT be the entire insert of the sequence close. It may be shorter because we only sequence overlapping sections conce, or longer, because we arrange for a small overlapp between neighbouring submissions.
                                                                                                                                                                                                                                                                                  acetyl-coenzyme a synthetase; AMP-binding, AMP-binding; cycl; cytochrome c; glutathione s-transferase; Glycosyl hydrolase; invl; invertase; LTR; pseudogene. Schizosaccharomyces pombe (fission yeast) Schizosaccharomyces pombe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequencing project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 1SA, E-mail: barrell@sanger.ac.uk and atholieke Universiteit Leuven, Faculty of Agricultural and Applied Biological Sciences, Laboratory of Gene Technology, Kardinaal Mercierlaan 92 Blok F, B-3001 Leuven, Belgium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Details of yeast sequencing at the Sanger Centre are available on the World Wide Web.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note="nominal overlap with SPCC417 AL035076 S.pombe chromosome III cosmid c417."

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contists are based on estimates that have provided by the gubmitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This sequence will be replaced

                                             CDS
(ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP. Protein homologies of the coding regions were searched against NGBI Nonzedundant Protein database with BLASTP. BSTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative' and 'like protein. A gene without significant homology to any protein name to indicate the homology level significant homology to any protein but with EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction program is also classified as a "hypothetical" protein and IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence. This sequence of PoGB1POS clone has an overlap with OSJNBAD007712 (DDBJ: AP004990) clone at 5' end and with OSJNBAD044CIS (DDBJ: AP004990) and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /codon_start=1

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
